Duncan,

This email is to provide written documentation of how you met the success criteria, my feedback, and recommendations for future improvements.

Overall the program met the success criteria listed below:

- Client will be able to modify Students, Dates, Excuses and Attendance
- Client will be able to take attendance through a GUI
- User-Friendly GUI
- Referral status will be calculated
- Client will be able to see all results in a spreadsheet
- Client will be able to see students categorized by their referrals (none, pending, on referral)
- Drop downs for dates and student names
- Remove students dynamically once attendance is taken
- Include a legend for attendance when you view the tables
- Allow client to see specific students only
- Can be used on any platform

The program is easy to use and fairly intuitive. The program is very useful and I love the graphics because they are appealing and clean.

In terms of future features, I would like to click on a person and for the program to tell me how many presents, absents, etc (as this is difficult to see for a lot of dates). I think that having a tutorial that explains each button would also be helpful.

Thank you,

Sara Conroy
